

ShippingLIVE!® can save you money in shipping costs and efficiency gains, and that's *money that goes directly to your bottom line!*

What Can ShippingLIVE!® Do For You?

- Dramatic Freight Cost Reduction
- Ensure Client and Carrier Compliance
- Streamline Distribution Center Operations
- Enforce Enterprise Business Rules
- Real-time Decision Making and Exception Handling
- Produces all domestic and international paper work

Current system costs

UPS/FedEx shipping stations, Shipping Station hardware, software, and maintenance. (**ShippingLIVE!®** combines all of the shipping functions into a single ship station, which eliminates the need for multiple hardware and software systems that must be maintained.) *By giving up the carrier shipping stations you may be able to negotiate a better shipping rate.*

Consolidation

Where applicable **ShippingLIVE!®** supports grouping multiple shipments into a single shipment and we support Hundredweight discounts.

Error Elimination

By bringing down order information from the ERP or WMS manual keying of the informa-

tion can be eliminated and errors significantly reduced. (It typically costs \$50 to correct a single error; Texas A&M Study, there are typically one error in every 300 keystrokes; Department of Defense)

Reduction of Labor

Because many aspects of your shipping operation may currently be manual, utilizing **ShippingLIVE!®** can eliminate most of the manual operations now being performed.

Freight Reconciliation

ShippingLIVE!® generates freight reconciliation reports that allow you to see the freight charges quoted vs. the freight charges billed. Additionally you can compare the level of service requested vs actual delivery. Both of these items can be big cost savings, both in reduced time and labor to generate and evaluate the reports and in recovery of costs from carriers.

Cash Flow

ShippingLIVE!® is directly integrated with your ERP system and reports up shipments as they occur. Invoices can be created as soon as the ERP can generate them without having to wait on nightly batches to get shipping information up to the accounting system.

Inbound Portal

ShippingLIVE!®'s Inbound Portal allows you to require your suppliers to comply with your shipping rules and requirements.

Rate Shopping

ShippingLIVE!® has a one click automated rate shopping feature that allows you to compare parcel and LTL shipments to determine the least cost carrier and or least cost and fastest route.

Enterprise Performance with Lowest Cost of Ownership

- **Server Platform:** Windows 2003/2008 32 & 64 bit. Native ASP .NET 3.5. MS SQL 2005. Developed as a set of web services
